Piet se Pad is on sand and shale and the plants are adapted to these nutrient-poor, easily leached soils. *Do not add or introduce any bone-meal, fertilizers, foreign mulch, peat, wood chips or other soil types* – these will all cause your plants to die, and introduce alien invasive weed seeds. PSP is built on the edge of the Montagu Mountain Reserve, and we must not let any invasives into this pristine veld conservation area. Alien trees also increase the fire hazard and fire intensity manifold.
